

Introducing Minesoft Patent Viewer

Minesoft Patent Viewer offers an advanced, user-friendly environment for the viewing and close examination of PDF documents and corresponding text documents.

Patent Viewer is available to all PatentArchive *and to* PatentOrder users, to visualise patent documents. Search terms, such as keywords, can be entered into a list and will then be highlighted in the full text, which appears on one side of the screen, while the original patent document in PDF format is displayed on the other side of the screen.

Full text and the PDF copy of the original document can be downloaded on demand, using PatentOrder's fast delivery engine. Documents are available for use with Minesoft Patent Viewer within seconds. They are available immediately from PatentArchive, if previously stored.

VIEWING AND NAVIGATING PATENT DOCUMENTS

Both document types (PDF and Text mode) are separated into various fragments, such as abstract, bibliographic (front page) details, description of the invention, legal claims, search report. It is very easy to navigate directly to a section of particular interest.

A Hit Map shows precisely where the highlighted terms (e.g. keywords) occur in the document, a time saving device when checking patent documents, which are frequently very long and complex. The Hit Map can be visualised at any time but only when necessary – and then the frequency and inter-relationship of the highlighted terms is unambiguous, seen at a glance.

By clicking on a term in the Hit Map, users jump to the next occurrence of the term.

High-resolution drawings can be viewed, as well as the Mosaic of drawings. The size of the split screen can be adjusted to allow for closer examination e.g. of a drawing, or of pertinent text.

LOCATING AND STORING DOCUMENTS

Browse Index, Sort Results, Search Archive and Citation Features help users locate and manage data. New and on-going projects are stored in Folders and Work Files (Sub-folders), managing documentation.

Comprehensive Notes (annotations) can be added, thus sharing expert insight and knowledge about technical fields or competitor activities across an organisation

Minesoft Patent Viewer helps users study patent specifications closely, on screen. Designed primarily for patent professionals and lawyers, the ease of navigation and display of keywords-in-context make Patent Viewer an ideal Intranet tool – bringing patents closer to engineers, scientists and business researchers.

(Free trials and demonstrations are available, please contact Minesoft).
