

## **RWS AND MINESOFT ADD OVER 10 MILLION FULL-TEXT PATENT DOCUMENTS TO PATBASE**

Over 10 million full-text patent documents published around the world are now available in PatBase, with more being added daily.

PatBase covers over 75 patent-issuing authorities and is organised into patent families for speed and convenience.

Searchable full-text from US, EP, PCT and GB patent-issuing authorities has been grouped into existing patent families for comfort, speed and ease of retrieval. Viewing full-text is made easier in PatBase by:

- advanced keyword-in-context features;
- concise, hyper-linked hit maps;
- multi-colour highlighting of terms

Keywords can be searched in any or all text sections of a patent document. Searching for keywords together with US, European and International Patent Classifications, which are added and updated routinely in PatBase, optimises search results.

Major countries are added to the database on their day of publication, making PatBase an ideal partner for provision of competitive intelligence monitoring services. German (DE) and French (FR) data is available also and is being added to continuously.

The modern patent searching interface has been expanded to cater for full text searches, viewing technical drawings, citation reports and retrieval. Project work can be held in inter-active folders and updated continually.

In addition, integrated links enable rapid examination of legal status, patent registers, copies of original patents in PDF format, as well as providing a range of professional patent information services including file wrappers and translations.
