

New Patent Family, Legal Status Module and File Wrappers for Minesoft PatentOrder

INPADOC patent family searching has been integrated into PatentOrder Desktop and can be added to web versions on Intranets or hosted by Minesoft.

A separate Legal Status Portal is available too. Please contact Minesoft for further information or for trials of this new unlimited use, fixed price service, which incorporates links directly to corresponding documents located at Patent Registers and additional Legal Status information.

File Wrappers

EP and EURO-PCT file wrappers can be ordered using PatentOrder Desktop by entering the patent publication number or the application number. Please prefix with PW when using the publication number:

PWEP1000009 PWWO0101235

When ordering file wrappers using the application number, please prefix with FW (not PW).

PCT and US patent documents are available on the day of publication as well as other major collections. Copies of patent documents from approximately 50 countries can be retrieved and archived using the PatentOrder document delivery service.

PDF Bookmarks are available but this feature can be disabled from the configuration screen of the software if preferred.

Please update PatentOrder Desktop software by clicking on "File>>Software update" to take advantage of new options.
